

Electrician sheet: Salus Solara Traditional Outdoor Sauna, 6 Person

From InHouse Wellness, data updated 2026-10-07. Model page: inhousewellness.com/pages/sauna-database/salus-solara-6-person (<https://inhousewellness.com/pages/sauna-database/salus-solara-6-person>).

What the manufacturer states about the circuit

Circuit (Control for Lights and Music) · Circuit (Stove)

...“Electrical service: 240V / 40AMP (Stove) and 120V / 15AMP (Control for Lights and Music)”...

Listed · manufacturer page (<https://www.salussaunas.com/products/solara-traditional-outdoor-sauna-6-person>) · verified 2026-09-27

Heater

Rated heater power

8 kW

...“Interior (WxDxH): 63" x 78" x 88" 6 person capacity 8.0 kw Stove with built in controls”...

Listed · manufacturer page (<https://www.salussaunas.com/products/solara-traditional-outdoor-sauna-6-person>) · verified 2026-09-27

Heater current draw (calculated from rated kW and voltage)

33.3 A

$8 \text{ kW} \times 1000 \div 240 \text{ V}$. Both inputs come from the manufacturer. This is what the heater draws, not a breaker size. How it is calculated

Questions for your electrician

1. My main panel is rated 100 A. Given my existing appliances, is a load calculation needed before adding this sauna?
2. I count 2 open breaker spaces. Is that enough for what this sauna needs?
3. Does this sauna need its own dedicated circuit, and does the manufacturer's manual call for GFCI protection?
4. Does this installation need a permit and an inspection where I live?

Local electrical codes vary. The manufacturer's installation manual and your local code govern, and a licensed electrician sizes and installs the circuit.
